**HETRONIC**

# GR / EURO

The HETRONIC GR family of transmitters is designed for industrial applications. The GR & EURO allow plenty of space for joysticks, pushbuttons and toggle switches while the lightweight design and ergonomic shoulder harness makes the operator comfortable hour after hour.

## Typical Applications:

Like most Hetric products, the GR & EURO transmitters are designed to fit a broad variety of applications. It's ideal for tower cranes, material handling, overhead cranes, work platforms, specialty applications and container handling.

The GR is available with up to four dual axis joysticks (digital and proportional) or up to seven single axis paddle levers. It comes standard with a battery charger and two rechargeable batteries.

The GR is available as a customized transmitter that is tailored for your needs. Please note we only offer the EURO/GR system for customized solutions.

The EURO is primarily designed for applications such as tunnel-drilling-machines and earthmoving equipment. The EURO allows room to accommodate many joysticks, toggle switches and other operator interfaces while remaining comfortable for the operator utilizing the shoulder harness.

The ergonomical and lightweight design allows operators to easily access control elements. The joysticks or paddle levers permit a smooth operation of the machine without operator fatigue.

EURO with two dual axis joysticks and numerous feedback LED's

GR with three dual axis joysticks

About Hetric:  
HETRONIC is specialized in safety radio remote controls. Our four manufacturing facilities and our sales representatives in over 45 countries provide maximum knowledge and support for our customers. We're confident that our innovative products will increase the safety and efficiency of your machines.
