HH MFSHL

The HETRONIC **HH MFSHL** series was designed to serve the short-range market of professional radio remote controls. It's engineered to control a limited number of functions without sacrificing safety and reliability. The **HH MFSHL** offers high reliability, high quality and it's competitively priced.

The Design:

All **HH MFSHL** transmitters are powered by 2 AA batteries which allow for up to 500 hours of operation. Its pistol grip design allows for an easy single-hand operation. The highly durable toggle switches or membrane switches are within easy reach of the thumb.

The housing is compact but rugged and several different configuration standards are offered for "off-the-shelf" availability.

Applications:

Like most Hetronic products, the **HH MFSHL** series fits a broad variety of applications. It's ideal for chain hoists, small overhead cranes, conveyor systems, monorails, hook loaders, concrete mixers, tow trucks, tailgates and many other types of machinery.

The **HH MFSHL** transmitters are fully compatible with Hetronic's line of MFSHL receivers.

MFS:

The MFS feature enables up to 20 transmitters to be operated in close proximity while sharing the same frequency. Therefore, operators don't have to worry about frequency management.

H-Link:

H-Link is an intuitive and user-friendly software that runs on a PC with the H-Link Dongle USB attached. It provides remote access to the settings and parameters within the radio remote control. Individual settings are accessed and configured using the PC, H-link Dongle combination and then uploaded wirelessly to the transmitter or receiver. In short: The configuration of a radio remote can be changed or customized at a distance!

HH Transmitter with toggle switches and optional protective guard.

About Configuring Your RRC:

Individual settings are accessed and configured using the H-Link USB RF Dongle connected to a PC and then uploaded to the transmitter. The configuration of a radio remote can be changed or customized at a distance!
